

Communicating Can Be Quick & Simple

The UniPage PTX buttons are battery powered remote radio button transmitters. Easily mounted these units provide communications to specially designed pagers - simply add a PTX to streamline your operations.

Ideal for StaffCall and small GuestCall system or simply to alert a pager to "attendance required" at a reception or loading dock. Connect directly to a sensor (security or industrial) to be alerted when a contact is activated.

The PTX transmitter can be discreetly mounted providing a one touch location based message for assistance (these units can also be linked to an overhead LED sign if required).
