UniPage On-Site Paging Systems

Medical centres, pathology labs and pharmacies are essential services that often struggle to manage queues in busy periods. Crowded spaces increase stress on staff and can also increase the spread of infectious diseases like we are seeing with COVID19.

Implementing a UniPage On-Site Paging system can equip your staff and patients to appropriately distance themselves. Waiting patients are put in an **invisible queue** and alerted with UHF technology. This allows patients to disperse with the peace of mind knowing they will not miss their turn.

Powerful transmitter - 2km (line of sight)

This allows people to wait inside or outside your premises

Durable Design

Made with commercial grade materials. Sealed and protected. This makes it easy to sanitize between each use.

Beep/Vibe/Flash Alert with multicoloured LEDs

Customise your alert for discretion
